

# Troubleshooting the Build Process

[Contents](#) [Previous](#) [Next](#)

If problems occur when building any part of the CDAT component software, you can view the build error of an individual package in its log file, which is located in the directory:

- `<CDAT_SRC_DIRECTORY>/logs`

You can also find log files in the "build" subdirectories of "pysrc" and "exsrc". That is, in

- `<CDAT_SRC_DIRECTORY>/pysrc/build`
- `<CDAT_SRC_DIRECTORY>/exsrc/build`

Example logs can be found in the following directory:

- `<CDAT_SRC_DIRECTORY>/logs/samples`
